PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in CI/CD pipeline automation, Infrastructure as Code (IaC), cloud infrastructure provisioning, and container orchestration. Reduced environment provisioning time from 2 hours to under 10 minutes using Terraform and cut deployment cycles from 40 minutes to under 5 minutes using GitHub Actions and Jenkins. Experienced with AWS, Docker, and Kubernetes across multi-environment deployments (development, staging, production). Background in secure software delivery and DevSecOps practices, including OWASP-aligned API hardening, AWS IAM access control, and container security. MCA graduate with a strong foundation in automation-first engineering and cloud-native systems.

TECHNICAL SKILLS

CI/CD & Automation: Jenkins, GitHub Actions, GitLab CI — pipeline design, automated build/test/deploy, zero-downtime releases

Infrastructure as Code (IaC): Terraform, AWS CloudFormation (familiar) — provisioning, state management, config drift elimination

Container Orchestration: Kubernetes (Minikube) — pod scheduling, liveness/readiness probes, rolling updates, health checks

Containerization: Docker, Docker Compose — image builds, multi-stage Dockerfiles, container security, registry management

Cloud Platforms: AWS, Azure (familiar) — environment provisioning, least-privilege access, cloud networking

Security: OWASP Top 1, JWT, RBAC, secret management, container security best practices

Scripting & Automation: Python, Shell Scripting, JavaScript (Node.js) — deployment automation, tooling, and pipeline scripting

Configuration Management: Environment parity, config drift detection, secrets management, environment variable handling

Monitoring & Observability: Pipeline observability, health check design, deployment rollback strategies, uptime monitoring

Version Control & GitOps: Git, GitHub, GitLab — branching strategies, pull request workflows, GitOps deployment patterns

Databases: PostgreSQL, MySQL, MongoDB — schema management, connection pooling, environment-specific configs

Operating Systems: Linux (Ubuntu, Kali) — system administration, process management, service hardening, cron jobs

Tools: Postman, Swagger, VMware, VirtualBox, VS Code, Wireshark

PROFESSIONAL EXPERIENCE

DevOps Engineer Intern *Jan 2026 – Mar 2026*
Elevate Labs | Bengaluru, India

- Automated cloud infrastructure provisioning using Terraform (Infrastructure as Code) across development, staging, and production environments — reducing environment spin-up time from 2 hours to under 10 minutes and fully eliminating manual configuration drift.
- Designed and implemented end-to-end CI/CD pipelines using Jenkins and GitHub Actions for 3 containerized microservices, enabling zero-downtime deployments on every merge to the main branch.
- Orchestrated Kubernetes workloads including pod scheduling, liveness and readiness probe configuration, rolling update strategies, and automated health checks for a multi-container application suite.
- Standardized environment configuration management across all deployment targets, enforcing environment parity between development, staging, and production and eliminating deployment inconsistencies.
- Documented infrastructure runbooks and pipeline configurations, enabling any team member to reproduce the full environment stack without manual intervention.

Backend Developer & DevOps Intern *Jul 2025 – Dec 2025*
Basshub Locateus Pvt Ltd | Bengaluru, India

- Containerized a Node.js and PostgreSQL backend service using Docker and integrated it into a GitHub Actions CI/CD pipeline — reducing manual deployment steps from approximately 40 minutes to under 5 minutes per release.
- Provisioned and secured AWS infrastructure (EC2, S3, IAM) applying least-privilege access policies, supporting 99%+ availability across staging and production environments.
- Implemented DevSecOps practices throughout the pipeline: JWT authentication, RBAC enforcement, input validation, and OWASP-aligned secure coding — closing 5 security vulnerabilities before production.
- Built and deployed 12+ production REST API endpoints with query optimization and connection pooling, reducing average API response latency by 30% while maintaining all security controls.
- Wrote integration tests covering deployment failure paths, API timeout scenarios, and authentication edge cases — catching 3 critical bugs before they reached production.

Junior Cyber Security Analyst *Jul 2023 – Aug 2023*
Verzeo | Bengaluru, India

- Performed structured penetration tests and vulnerability assessments across 4 environments using Kali Linux, Metasploit, Nmap, and Burp Suite; identified 8 critical misconfigurations with findings mapped to OWASP Top 10.
- Conducted Linux system hardening — service minimization, permission auditing, firewall review — reducing attack surface and contributing recommendations that were incorporated into team security runbooks.
- Analyzed network traffic using Wireshark to detect anomalous patterns and unauthorized connections, strengthening monitoring and incident detection practices.

PROJECTS

TrippCard OTA — Cloud-Native Containerized Deployment *2025*

- Architected a Docker Compose-based deployment for a full-stack travel booking platform (Node.js + PostgreSQL), enabling any engineer to spin up the complete environment locally in under 2 minutes.
- Integrated Amadeus GDS REST API with retry logic, in-memory response caching, and graceful degradation on upstream failures — achieving 99%+ uptime in staging with zero data loss on failure.
- Deployed application on AWS (EC2, S3, IAM) with least-privilege access controls and secure environment variable management across all deployment stages.
- Implemented CI/CD-ready project structure with documented deployment process, integration tests, and environment parity between local and cloud environments.

Breaking the Bait — Automated ML Security Pipeline *2025*

- Built a fully automated attack simulation and data collection pipeline on Linux (Kali + Metasploitable 2) — demonstrating end-to-end automation engineering applied to a security domain.
- Engineered a reproducible Python pipeline for dataset generation, feature extraction, model training, and evaluation across Random Forest, SVM, and Autoencoder models; achieved 94% F1-score — published.

EDUCATION

Master of Computer Applications (MCA) 2025
Reva University, Bengaluru, India

Bachelor of Computer Applications (BCA) 2023
Amrita Vishwa Vidyapeetham, Mysore, India

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional (In Progress) | Amazon Web Services
- DevOps Advanced Projects with AI | Udemy
- Cisco Certified Support Technician – Cybersecurity (CCST) | Cisco
- IT Specialist – Network Security | Pearson
- Digital Forensics Essentials | EC-Council
